                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC composition comprising the polypeptide, its complement, biological CC equivalent or fragment, or the polynucleotide that is comprised in the CC expression vector; (6) a pharmaceutical composition comprising the CC polypeptide of (1) and a carrier; (7) a protein chip comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) CC immunising against Alloicoccus otitidis by administering to a host the immunogenic composition; (9) detecting and/or identifying Alloicoccus otitidis in the biological sample; (10) a kit comprising a container CC containing the novel polynucleotide, its degenerate variant or fragment, CC or the antibody of (4); and (11) producing a polypeptide by culturing the CC genetically engineered host cell under conditions suitable to produce the CC polypeptide from the culture. (1) can be used in gene therapy. The CC containing assays and monitoring of effects during drug clinical trials. CC The polynucleotides are useful for expressing and detecting Alloicoccus otitidis. The present sequence represents the entire genome of CC Alloicoccus otitidis, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1754382 BP; 484756A; 391265C; 387369G; 490992T; OU; OOther;

Tossberg J, Wey
                           The invention relates to a method for identifying a herbicidal compound. The method of the invention comprises combining a polypeptide having at least 90% identical to any one of 48 69-1008 residue amino acid sequences (designated as p1-P48), given in the specification, with a compound to be tested for the ability to bind to the polypeptide or inhibit the activity of the polypeptide, under condictions conducive to binding or inhibiting, respectively. Also disclosed is a method for killing or inhibiting the
                                                                                                                                                                                                                                                                                                                                                      Identifying an herbicidal compound, useful for controlling undesirable vegetation, comprises combining a polypeptide with a compound to be tested for the ability to bind to the polypeptide or inhibit the activities of the activities of the ability to bind to the polypeptide or inhibit the activities that the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activities of the activiti

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        compound identified by the novel method, a chimeric construct comprising a promoter operatively linked to the nucleic acid molecule, a recombinant vector comprising the chimeric construct and a host cell comprising the nucleic acid molecule. The method and polypeptides are useful in screening assays to identify compounds that interact or inhibit the polypeptides, thus as potential herbicides to control undesirable vegetation such as weeds in crop fields. Nucleic acid molecules (odd numbers between ADB95003 and ADB95097) isolated from Arabidopsis thaliana comprising nucleotide sequences that encode proteins (even numbers between ADB95004-ADB95098) are essential for plant growth and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2760
